

Property program

Property examiner

This course focuses on teaching file reviewers, desk adjusters and examiners how to review completed estimates on damaged residential buildings which have been prepared by other adjusters or contractors.

1 week — \$1,995

Residential policy

This course is designed for entry level and experienced students who must be able to understand and apply policy language from standard homeowners and dwelling policies as they relate to investigating and handling property claims.

1 week — \$1,995 (week 1 of 3-week course, Property adjusting \$3,995)

Residential estimating

This course teaches students how to scope and prepare thorough and accurate estimates on residential property damage.

2 weeks — \$2,995 (weeks 2-3 of 3-week course, Property adjusting \$3,995)

Residential roofing contractor certification

This course is designed for entry level and experienced residential contractors who require an overview of Xactimate and estimating roofs.

3 days — \$1,195

UAS drone certification

This course covers the techniques and best practices required to safely and successfully utilize drones for inspection purposes. An online prep course for licensing is included.

4 days — \$1,595

Advanced roofing certification for adjusters

This advanced level course is designed for experienced property damage estimators and appraisers.

4 days — \$1,595

Commercial adjusting and business income

This course analyzes the commercial property policy, including building and personal property coverage forms, the insuring agreement and other coverage forms. The student will also analyze business income and basic concepts of business income loss.

1 week — \$1,995

Commercial estimating

This course is designed for the individual who is required to produce or review structural damage repair estimates on commercial buildings of four stories or less.

1 week — \$1,995

Casualty and liability loss adjusting

This course teaches the principles of law and legal liability, automobile and general liability principles with an emphasis on statement-taking exercises. Actual cases are studied to enhance the student's ability to apply learned principles to real life applications.
